FileZilla and Cyberduck for FTP setup

- To login to your FTP account you need to enter the following (as provided to you by IT):

  - **Host/Server name** – site*xxx*.digitalskillsacademy.me
  - **User/Username** – site*xxx*
  - **Password** – as provided to you by IT

- Your site's files should be uploaded to the **public_html** folder
  - you can specify this as the default folder you see each time you login by
    - entering *public_html* in the **Path** field under More Options in Cyberduck or
    - entering *public_html* in **Default remote directory** under the Advanced tab in Filezilla

- The port number used is the default 21 so this can be left blank or input (it's **not 2083** as this is used for Control Panel access)

- If incorrect credentials are repeatedly tried, the server will lock you out requiring you to contact IT (it@digitalskillsacademy.me)
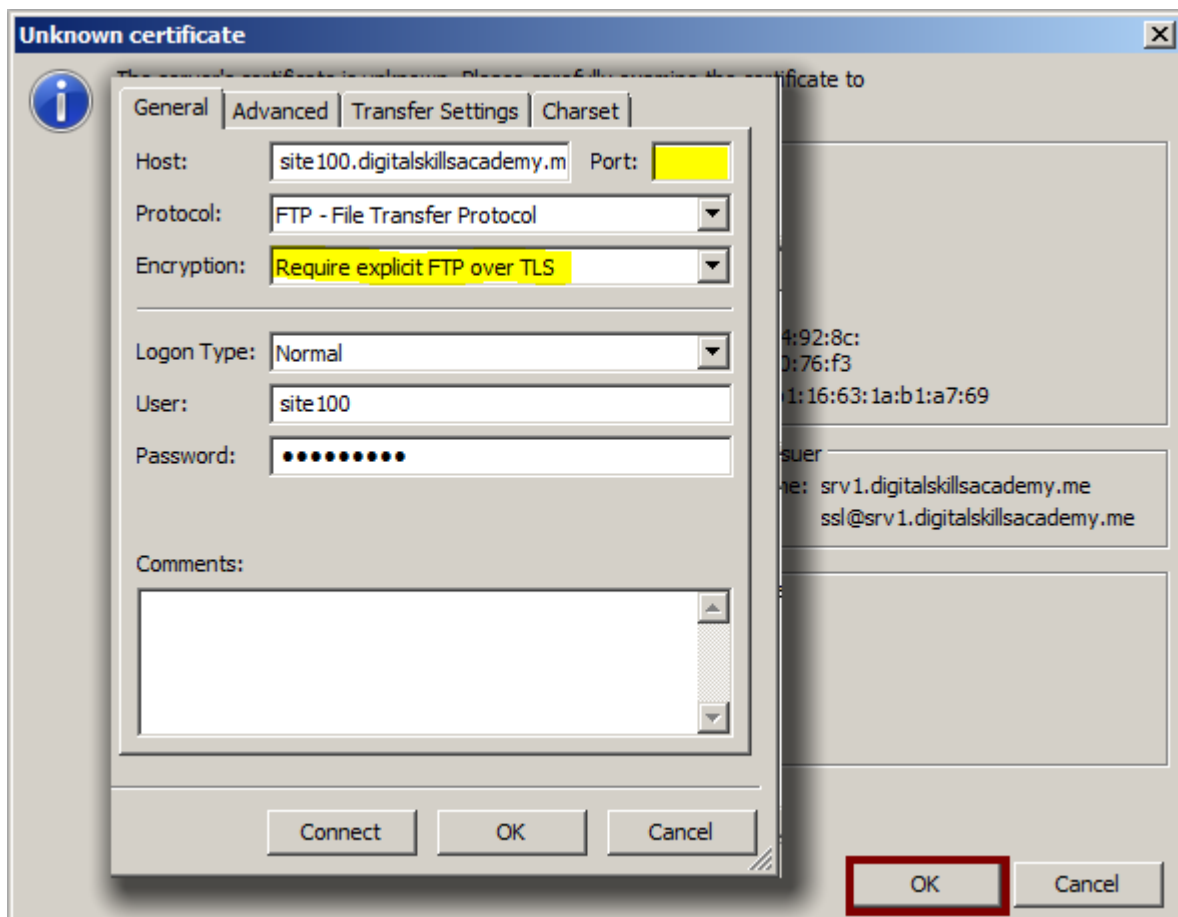

FileZilla Config

To enter our credentials in FileZilla, we first need to open the Site Manager. Go to File -> Site Manager...

Below is how a completed Site Manager screen for a user with a Host name of site100.digitalskillsacademy.me and a User name of site100 would look.

*Note the **Explicit FTP over TLS** setting.*

Just click OK to the Unknown certificate prompt.

Cyberduck config

To enter our credentials in Cyberduck we first need to open the connection. Go to File -> Open Connection...

Below is how a completed Connection screen for a user with a Host name of site100.digitalskillsacademy.me and a User name of site100 would look.

*Note the **FTP-SSL** setting.*

Just click continue to the Verify Certificate prompt.
